

Data Visualization for the Problem Statement

Data Visualization #1

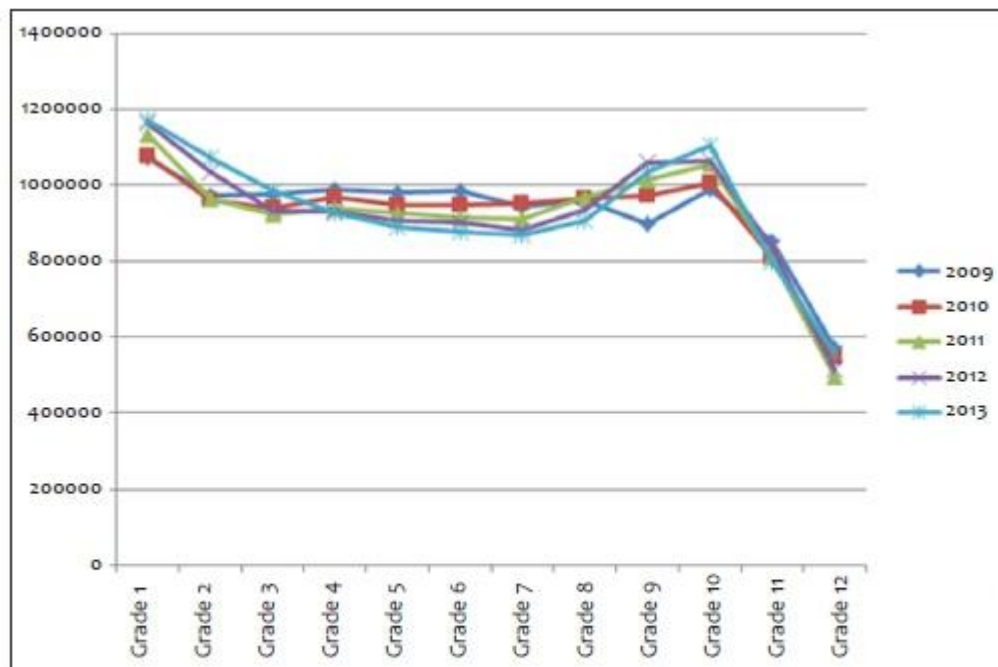

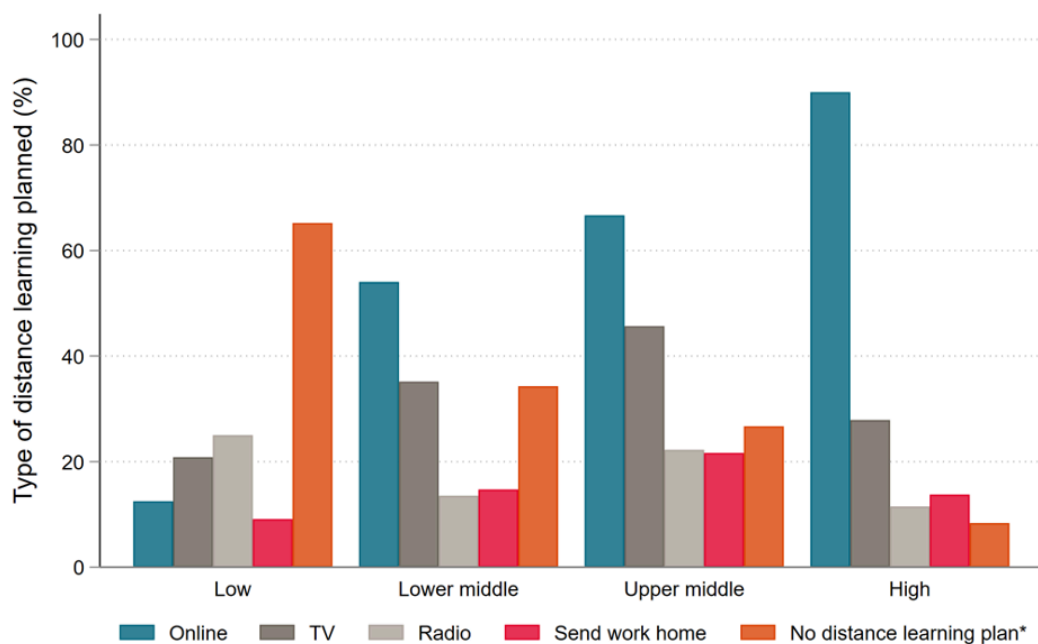

Figure 2: Enrolment in public schools by grade and year, 2009-2013 (Source: Author's calculation, based on SNAP data, 2009-2013)

Data Visualization #2

*No distance plan we could verify online

Data Visualization Analysis #1

The first visualisation shows how many students enrol into schools as the years go by. It's shown that there are less students that enrol in schools for their matric, but that number increases with each year.

Data Visualization Analysis #2

This visual shows the percentage of people in different living conditions, and the types of education they are able to receive. It's shown that in higher societies online learning is much more prominent whilst in the poorer societies there is a lot less distanced learning.
